

My experience with the local power company is that they are unable to resolve current line noise problems which interfere with the amateur radio service. They seem willing and make some attempts, but lack the expertise and experience to deal with traditional line noise issues. Allowing them to expand to BPL would create additional interference problems which would not be resolved without considerable conflict and possible governmental intervention. The Commission could be multiplying its already overloaded workload dealing with resolving BPL complaints.

Interference problems are a low priority for electric companies and they have a poor record in solving interference problems.

Please do not expand BPL and make a bad situation worse.

Thank you.
